

Thank you for purchasing **rtx_gym** we're grateful for your support. If you'd ever have a question and / or need our help, please reach out to us by sending an email or go ahead and create a ticket on our discord: <https://discord.gg/P6KdaDpgAk>

Install instructions (Standalone):

1. Put rtx_gym folder to your resources
2. Open config.lua file
3. Configure your config.lua to your preferences
4. Upload sql sql_STANDALONE-QBCORE.sql file to your mysql database.
5. Open fxmanifest.lua and edit it same like on this screenshot (<https://i.imgur.com/LWaYxz7.png>) remove -- from line 11, or replace line 11 with '@oxmysql/lib/MySQL.lua',
6. Put rtx_gym to the server.cfg

Install instructions (QBCore):

1. Put rtx_gym folder to your resources
2. Open config.lua file
3. Replace Config.Framework = "standalone" with Config.Framework = "qbcore"
4. Configure your config.lua to your preferences
5. Upload sql sql_STANDALONE-QBCORE.sql file to your mysql database.
6. Open fxmanifest.lua and edit it same like on this screenshot (<https://i.imgur.com/LWaYxz7.png>) remove -- from line 11, or replace line 11 with '@oxmysql/lib/MySQL.lua',
7. Put rtx_gym to the server.cfg
6. Add new items to qb-core/shared/items.lua - items name: protein, creatine, preworkout, testosterone

Example items line for items.lua:

```
[protein] = {[name] = 'protein', [label] = 'Protein', [weight] = 1000, [type] = 'item', [image] = 'protein.png', [unique] = false, [useable] = true, [shouldClose] = true, [combinable] = nil, [description] = 'Protein'},
[creatine] = {[name] = 'creatine', [label] = 'Creatine', [weight] = 1000, [type] = 'item', [image] = 'creatine.png', [unique] = false, [useable] = true, [shouldClose] = true, [combinable] = nil, [description] = 'Creatine'},
[preworkout] = {[name] = 'preworkout', [label] = 'Peworkout', [weight] = 1000, [type] = 'item', [image] = 'preworkout.png', [unique] = false, [useable] = true, [shouldClose] = true, [combinable] = nil, [description] = 'Peworkout'},
[testosterone] = {[name] = 'testosterone', [label] = 'Testosterone', [weight] = 1000, [type] = 'item', [image] = 'testosterone.png', [unique] = false, [useable] = true, [shouldClose] = true, [combinable] = nil, [description] = 'Testosterone'},
```

Install instructions (ESX):

1. Put rtx_gym folder to your resources
2. Open config.lua file
3. Replace Config.Framework = "standalone" with Config.Framework = "esx"
4. Configure your config.lua to your preferences
5. Upload sql sql_ESX.sql file to your mysql database.
6. Open fxmanifest.lua and edit it same like on this screenshot (<https://i.imgur.com/yoULcX4.png>) remove -- from line 10, or replace line 10 with '@mysql-async/lib/MySQL.lua',
7. Put rtx_gym to the server.cfg
